

FIRST CIRCULAR - SAVE THE DATE

Sixth International Colloquium on

**Historical earthquakes & paleoseismology studies:
their contribution to the knowledge of the long-term seismic activity
and to seismic hazard assessment**

Han-sur-Lesse (Belgium) - 24-25 October 2018

Field trip on 26 October 2018: Han-sur-Lesse and Rochefort caves

Organized by the Royal Observatory of Belgium

Sponsored by the "Domaine des Grottes de Han", the FNRS and BELSPO

The colloquium is the 6th of a series that began in 2013 in Paris with the colloquium "Macroseismicity: sharing and use of historical data". The main topics are: historical earthquakes, macroseismology, archeoseismology, paleoseismology, earthquake catalogues and databases, active faults, seismotectonics, neotectonics, and their contribution to the knowledge of seismic hazard and a better understanding of the long term seismic activity. A specific session will be devoted to earthquake effects in caves.
